SUMMARY

Ph.D. scholar in Electrical Engineering specializing in thermal transport and lattice dynamics in functional oxides and solid-state ionic conductors. Experienced in crystal and thin-film growth, vacuum deposition, material characterization, and data-driven modeling using Python and MATLAB. Published 5 first-author works in leading journals and skilled at collaborating with national labs and cross-disciplinary device and materials teams. Additional teaching assistant experience during Ph.D. studies.

EDUCATION

University of California, Riverside, CA Ph.D. in Electrical and Computer Engineering	Mar. 2021 – Jun. 2026 (expected)
Columbia University in the City of New York, NY Master of Science, Material Science and Engineering	Aug. 2019 – Feb. 2021
University of California, Berkeley, CA Summer Session, Physics	Jul. 2017 – Aug. 2017
Beijing Normal University, CN Bachelor of Science, Physics	Sep. 2015 – Jun. 2019

SKILLS

Software	Python, MATLAB, R, SQL, LaTeX, COMSOL, SolidWorks, Linux
Analysis Tools	GSAS-II, Mantid, ImageJ, VESTA, Quantum ESPRESSO, VASP
Synthesis & Growth	Floating-Zone Crystal Growth, PVD / Magnetron Sputtering, CVD
Characterization	SEM, TEM, Scanning Tunneling Microscopy (STM), XRD, AFM, Inelastic Neutron Scattering, Raman, FTIR
Transport Properties	PPMS, DSC, TGA, Four-Probe Transport, Mechanical Strength Testing
Battery & Electrochem	Prototype Cell Assembly, Separator Fabrication, EIS, Galvanostatic Cycling, Thermal Abuse Testing
Methods	Design of Experiments (DOE), AI Agent Training

AWARDS & ACTIVITIES

- Dissertation Completion Fellowship Award, University of California, Riverside (2025)
- MRS 2023 Spring Meeting Highly Commended Student Talk Award
- ‘Jingshi’ Scholarship, Beijing Normal University (2016 – 2018)
- COMAP Mathematical Contest in Modeling — team member and team leader

EXPERIENCE

Graduate Research Assistant <i>University of California</i>	Jun. 2021 – Jun. 2025 <i>Riverside, CA</i>
• Pioneered lattice-dynamics studies on Li-ion solid-state electrolytes, extending work previously limited to Cu- and Ag-ion systems. • Published 5 first-author papers in journals including <i>PRX Energy</i> and <i>J. Mater. Chem. A</i>. • Built a floating-zone crystal growth workflow from scratch, producing centimeter-scale LLZTO single crystals that enabled phonon-resolved neutron scattering measurements previously infeasible on polycrystalline samples.	

- Identified *diffuson*-mediated thermal transport in Li-ion conductors, providing the first verification of this mechanism in Li-ion solid-state electrolytes.
- Developed a two-channel (phonon + *diffuson*) thermal-conductivity model in MATLAB that explained anomalous temperature dependence in Li-ion conductors where the traditional Debye model failed.

Experiment Lead

Oak Ridge National Laboratory

Jan. 2022 – Jul. 2023

Oak Ridge, TN

- Authored two successful beam time proposals and led inelastic neutron-scattering experiments on LLZTO single crystals using TAX (HFIR) and ARCS (SNS) at Oak Ridge National Laboratory (ORNL).
- Resolved the full phonon dispersion of a garnet solid electrolyte for the first time, providing experimental benchmarks for ab initio lattice-dynamics calculations.
- Built automated data-reduction pipelines in Mantid and Python, significantly reducing manual analysis time.
- Managed on-site experimental decisions and coordinated across ~ 7 research groups spanning UCR, UT Austin, ORNL, ETH Zürich, and TU Wien.

Student Researcher

Columbia University

Sep. 2019 – Jan. 2021

New York, NY

- Engineered composite Li-ion battery separators (γ -C₃N₄/PVDF) via solution processing, targeting improved electrochemical reaction kinetics.
- Assembled and tested CR2032 full cells over 100+ galvanostatic cycles, characterizing cycling performance and interfacial stability via EIS.
- Applied first-principles DFT (Quantum ESPRESSO) to model defect stability in olivine cathode structures, complementing experimental work with computational materials design.

Student Researcher

Beijing Normal University

Sep. 2018 – May 2019

Beijing, CN

- Designed a uniaxial-strain apparatus in SolidWorks exploiting differential thermal contraction for controlled detwinning of iron-based superconductors below 140 K.
- Built a Monte Carlo simulation in MATLAB to model atomic movement of metal atoms inside multi-wall carbon nanotubes, reproducing experimental observations.

Administrative Assistant, Physics Department

Beijing Normal University

Sep. 2018 – Jan. 2019

Beijing, CN

- Managed archival of 3 years of departmental paperwork and organized the academic calendar for 4 course sections.

Student Intern

Shanghai East China Computer Corp.

Jul. 2016 – Aug. 2016

Shanghai, CN

- Gained hands-on exposure to IT industry workflows, strengthening teamwork and cross-functional communication skills.
